Subject English Date May 11,2020 to May 16, 2020 Lesson Unseen Comprehension Passage Topic Reading Assignment Read the following passage carefully and answer the questions given below: Recent studies show that tiny couch potatoes are slow learners. Too much TV watching can harm children's ability to learn and even reduce their chances of getting college degree, three new studies suggest in the latest effort to examine the effects of TV on kids. Critics faulted the research for not adequately considering the content of the TV watched, but experts said it bolsters advice that children shouldn't have TVs in their rooms. The separate findings were published on Monday in the July issue of Archives of Pediatrics& Adolescent Medicine. One of the studies involved nearly 400 northern California third-graders. Those with TVs in their bedrooms scored about eight points lower in Math and Language arts tests, than children without bedroom TVs. A second study, looking at nearly 1,000 adults in New Zealand, found lower education levels among 26-year-olds who had watched lots of TV during childhood. A third study, based on data from nearly 1,800 US children, found that those who watched over three hours of TV daily before age 3 scored slightly worse on academic and intelligence tests at ages 6 and 7 than those who watched less TV. The effect was only modest but still worrisome, said co-author Frederic Zimmerman, a researcher at the University of Washington. Complete the following statements by choosing the correct options: (A) The term (couch potatoes) refers to people	New Era High School, Panchgani
